ydun

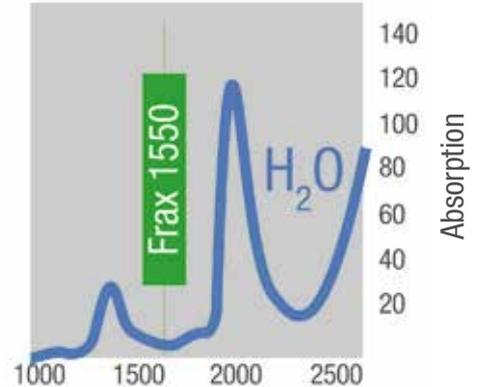

The Flexible and Effective Fractional Laser System

HIGH CLINICAL RESULTS

Ydun is a small, light and easy-to-use fractional laser system for procedures where you need high clinical performance.

Ydun is a future-proof fractional laser system designed for upcoming laser developments. Presently, Ydun comes with indications for use on a range of fractional non-ablative treatments:

- Non-ablative skin resurfacing, including texture, fine lines and wrinkles
- Stretch marks
- Acne scars
- Surgical scars

FLEXIBLE SETTINGS AND GREATER COMFORT

Conduct advanced treatments quickly with limited downtime and greater comfort for your patients. Using Ydun together with the fractional non-ablative laser Frax 1550, gives you full control of thermal effects, and thereby reduces the risk of side-effects.

A unique technology allows you to set pulse time and energy independently, giving full control of the thermal impact of the treatment. At the same time, the patented integrated Ellipse SoftCool™ system ensures that the patient experiences less pain and greater comfort during treatment with Frax 1550.

COMPLEX TREATMENTS MADE SAFE AND SIMPLE

With Ydun, you don't need to learn a program or apply complex formulas. Ellipse's trusted clinical intelligence interface ensures effective treatment and reduces the risk of side-effects. You simply select the treatment, the patient's skin type and suntan, and Ydun then automatically chooses the appropriate settings including energy level and pulse length. The unique Frax 1550 magnetic motion roller sensor ensures a uniform result and keeps track of the area treated and the total coverage achieved when you conduct a treatment.

OPTIMIZED PERFORMANCE

Ydun includes Remote Assistance and gives you the market's most reliable and easily serviced system. Your system will always run on the latest available software with all the latest features.

NO EXPENSIVE CONSUMABLES

The use of Ydun and Frax 1550 does not require the use of any consumables. Moreover, the unique Frax 1550 motion roller can easily be detached for disinfection between use.

USER-FRIENDLY DESIGN

Benefit from the user-friendly design. With its light weight, touchscreen and clinical intelligence, Ydun gives the operator a comfortable and effective tool.

Based on advanced safe and effective technology, Ydun supplements the range of Ellipse's SWT® and laser skin solutions, which now consist of the versatile SWT® and laser platform Nordlys, the two SWT® platforms, Nordlys Limited and Sirius, and the fractional laser system Ydun.

Dr. Victor Ross – Scripps Clinic Carmel Valley in San Diego CA, USA

"The novel Frax 1550 laser device offers important improvements of aging facial skin with short downtime and minimal side effects. I'm really impressed with with the ergonomics, user interface, clinical intelligence, and speed of the system."

Ydun (Idun in English) symbolises "ever-young", and is the Danish name for the Goddess of Youth in Nordic mythology who guards the golden apples that keeps the Gods eternally young. With Ydun by Ellipse you can perform fractional non-ablative treatments that will improve the structure of the dermis and give your patients a younger looking skin.

FLEXIBLE PARTNERSHIP

We would like to welcome you into the world of Ellipse – where perfection, technical superiority, quality and long-term partnership meet. Ydun has no running costs and no hidden ownership cost.

Ydun is a trademark of Ellipse A/S, a producer of light-based solutions for medical and cosmetic conditions. Ellipse A/S has gained the acclaim of doctors worldwide for the quality of Ellipse products and services.
